HOPE IN TRANSAPOCALYPTIC TIMES

*Turbulence, Change and Survival
in the 21st Century*

UN Sustainability Goals:

#10 - REDUCED INEQUALITIES & #11 - SUSTAINABLE CITIES AND COMMUNITIES

Tuesday, April 11, 2023 • 7:30 - 9:00 PM

Franciscan Center Conference Room A and B

The 21st Century has been called the “Age of Consequences.” It will be the end of industrial civilization as we have known it; fossil fuels will be depleted or their use largely abandoned; Earth will become hotter and less habitable; population growth will end; shortages of water and food will become chronic; biodiversity will decline; flora, fauna, and people will migrate; hot, cold, and digital wars will occur; regional alliances and states will change; technology will expand and falter; ideologies, cultures, and ways of living will clash and be transformed. Yet, while the world as we know it will be transformed, it will not be the end of the world – this is the meaning of “transapocalyptic.” Humanity will move from endless growth to living within limits, from rights to responsibilities. Nature will have its due. What is the hope for the newly Earthbound? Herman Greene will bring his life experience, his knowledge gained in the study of theology, philosophy, law, and ecology, and the ecozoic wisdom of Thomas Berry to bear on this.
